

Self-Leveling Drain Pan Resurfacer

Pancrete is a self-leveling coating that restores damaged HVAC drain pans without costly replacement. It pours over the existing surface, filling pits, corrosion damage, and uneven areas to create a smooth, durable drainage surface.

STOPS LEAKS | RESTORES DRAIN PANS | EXTENDS SYSTEM LIFE

Why drain pans fail

Condensate drain pans are constantly exposed to moisture, cleaners, and corrosion. Over time this damage causes rust, pits, and uneven surfaces that trap standing water and lead to leaks. Pancrete restores the surface by creating a new corrosion-resistant layer that promotes proper drainage and protects the pan from further deterioration.

Performance Benefits

Restores Drain Pans

Fills corrosion damage and uneven areas to create a smooth, functional drainage surface.

Stops Leaks

Seals holes and damaged areas that allow water to escape.

Self-Leveling Formula

Flows across the surface to create a consistent slope for proper condensate drainage.

Extends Equipment Life

Restores existing pans and prevents costly unit replacements.

Restore failing drain pans without costly replacements
