

Roll-On Coating for Metal Surfaces

V570 is a roll-on coating that repairs and protects metal surfaces exposed to corrosion. It fills cracks and pinholes while forming a tough barrier that stops rust and extends the life of HVAC components.

STOPS RUST | SEALS LEAKS | REPAIRS METAL

Why metal surfaces fail

Metal surfaces in HVAC environments are constantly exposed to moisture, cleaners, and corrosion. Over time this damage leads to rust, rough surfaces, and small cracks that allow leaks to develop. V570 seals cracks and pinholes while creating a durable barrier that protects metal from further corrosion and deterioration.

Protection Benefits

Repairs Surface Damage

Seals fine cracks and pinholes up to 25 mils to prevent leaks and restore surface integrity.

Stops Corrosion

Forms a tough protective barrier that prevents further rust and deterioration.

Flexible Application

Roll-on coating works on vertical, curved, or slanted metal surfaces.

Extends Equipment Life

Restores damaged surfaces and reduces costly replacements.

Restore and protect metal surfaces without costly replacements
