

CleanBond

Cleaner and Degreaser for Metals

Clean Bond is a powerful molecular degreaser engineered for metal preparation. It quickly removes oil, grease, and surface contaminants, reducing labor while preparing metal for restoration or coating.

DEGREASE | CONDITION | PREPARE FOR COATING

Why proper metal surface prep matters

Oil deposits, debris, and vapor residues prevent coatings from bonding properly. Clean Bond emulsifies and lifts contaminants, leaving metal surfaces clean and ready for the next stage of preparation.

Preparation Benefits

Powerful Degreasing

Breaks down oils and particles at a molecular level, making rinse-off easy.

Saves Labor

Spray-on formula for fast, thorough coverage, even in hard-to-reach areas

Rust Protection

When concentrated Clean Bond is applied, it acts as a flash rust inhibitor, preventing surface rust for up to three days.

Enhanced Bonding

Contains a bonding agent that adheres strongly to metal surfaces, ensuring coatings achieve maximum durability.

Maximize your resurfacing results with Clean Bond
